

## Eclipse Dates in 2022

The scientific point of view: An eclipse occurs when one object gets in between you and another object and blocks your view. From Earth, we routinely experience two kinds of eclipses: an eclipse of the Moon and an eclipse of the Sun.

Eclipses of the Moon: Sometimes, as the Earth orbits the Sun, it comes between the Sun and the Moon. When this happens, the Earth throws a dark shadow across the Moon. This is known as an eclipse of the Moon, or a lunar eclipse.

Eclipses of the Sun: Sometimes, the Moon passes between the Earth and the Sun. The Moon blocks the light of the Sun and a shadow of the Moon is cast on the Earth's surface. This is an eclipse of the Sun, or a solar eclipse.

There are three types of a solar eclipse: total, partial, and annular. During a total eclipse, the Moon completely covers our view of the Sun. A total eclipse is only visible from a narrow strip (about 150 km wide) of the Earth's surface at any one time. From the areas outside this narrow strip, the Sun appears to be only partially covered and a partial eclipse is seen. A partial eclipse will also occur if the Sun, Moon, and Earth are not precisely lined up. The eclipse cannot be total unless the center of the Moon's shadow is able to strike the Earth. The eclipse type that occurs when the Moon is at its farthest distance from the Earth is an annular eclipse. The Moon then appears too small to completely block out the disk of the Sun.

During a solar eclipse, the Moon actually casts two shadows toward Earth. One shadow is called the umbra which becomes smaller as it reaches the Earth. This is the dark center of the Moon's shadow. The second shadow is called the penumbra. This shadow becomes larger as it reaches the Earth. A total solar eclipse, or a complete blocking out of the Sun's light, can only be seen by those who live in the area covered by the umbra. People who live in the area of the Earth covered by the penumbra will see a partial eclipse.

A total solar eclipse can only occur when two events happen at the same time. The first event is a new Moon. This phase of the Moon occurs when the Sun is almost directly behind the Moon, and we see only a sliver of the Sun's light reflected by the Moon. During this time the Moon and the Sun appear close together. The second event that must occur is that the Moon must be in the right position, directly in the line of sight between the Earth and the Sun. These two events occur at the same time about once every year and a half.

### 2022 Solar Eclipse's

30 April - Solar Eclipse (NOT visible in South Africa)

16 May - Total Solar Eclipse (Visible in Durban 03:32am - 06:38am, Johannesburg 3:32am - 06:44am, Cape Town 03:32am - 07:40am)

25 October - Partial Solar Eclipse (NOT visible in South Africa)

### 2022 Lunar Eclipse's

08 November - Lunar Eclipse (NOT visible in South Africa)

An Eclipse Never Comes Alone: A solar eclipse always occurs about two weeks before or after a lunar eclipse. Usually, there are two eclipses in a row, but other times, there are three during the same eclipse season.

Kindly note:

If an Eclipse is not visible in your locality during an Eclipse then nothing is to be observe.

If an Eclipse is visible in your locality during an Eclipse then kindly click on this link for the Do's and Don't

## 30<sup>th</sup> April 2022 – Solar Eclipse NOT visible in S.A.

Regions seeing, at least, a partial eclipse: South/West South America, Pacific, Atlantic, Antarctica.

### EVENT

### UTC TIME

### TIME IN S.A.

First location to see the partial eclipse begin

30 Apr, 18:45

30 Apr, 20:45

Maximum Eclipse

30 Apr, 20:41

30 Apr, 22:41

Last location to see the partial eclipse end

30 Apr, 22:37

1 May, 00:37

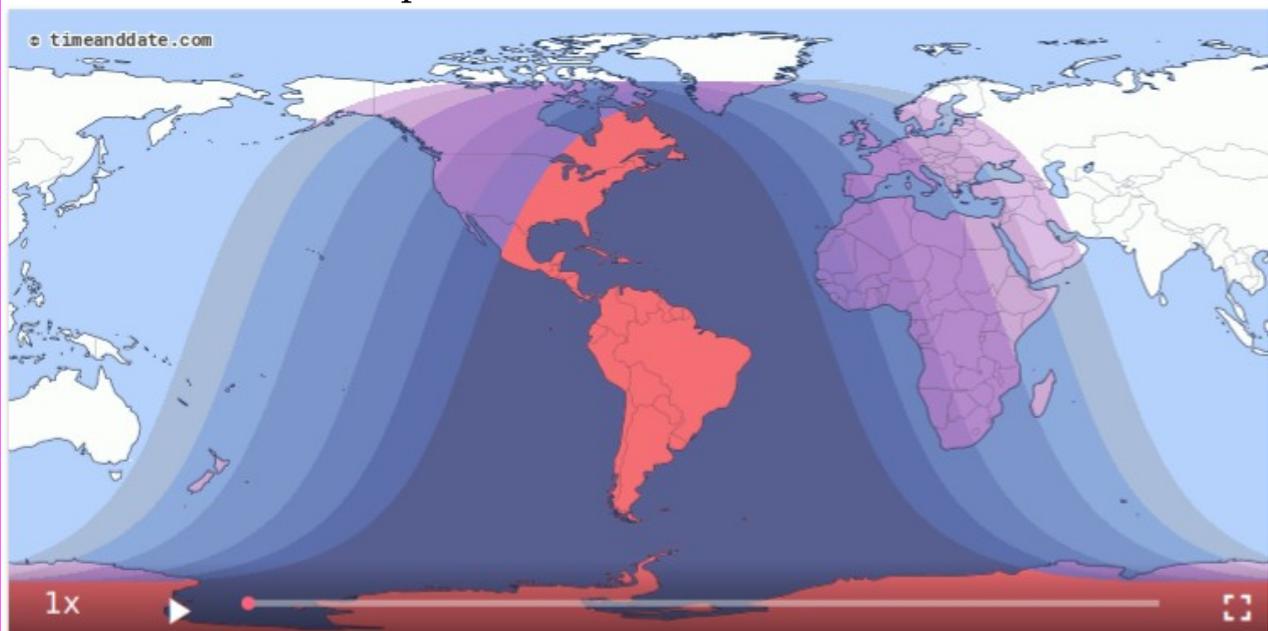

## 16<sup>th</sup> May 2022 – Total Solar Eclipse

### VISIBLE IN SOUTH AFRICA

Durban 03h32am – 06h38am

Johannesburg 03h32am – 06h44am

Cape Town 03h32am – 07h40am

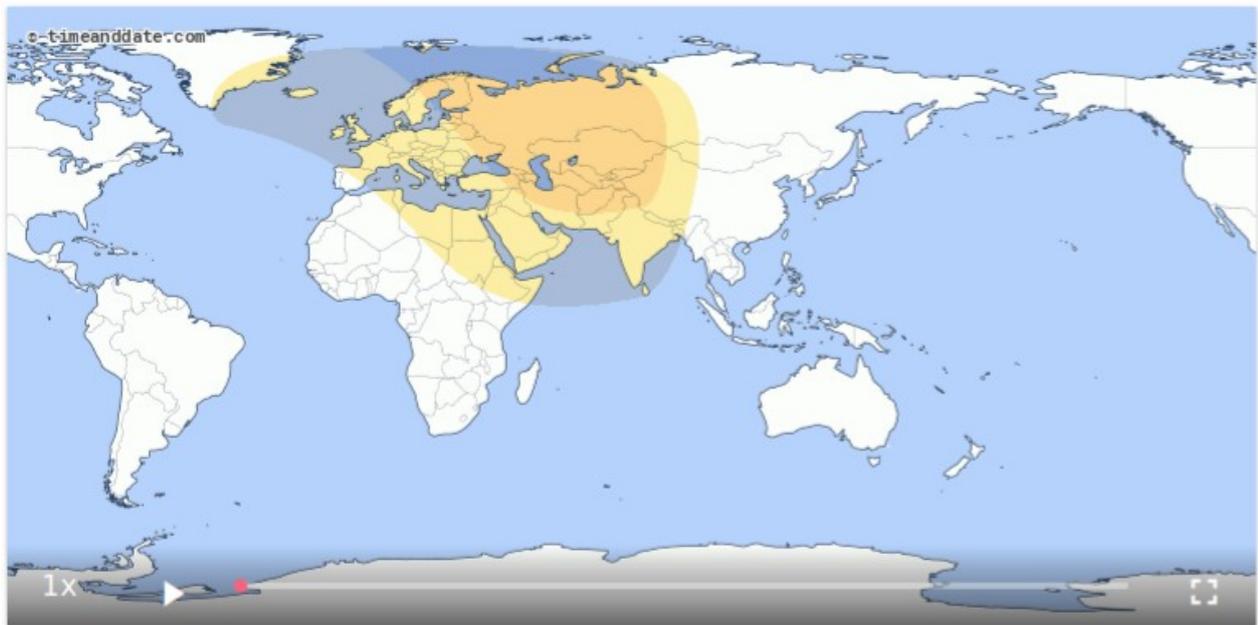

Regions seeing, at least, some parts of the eclipse: South/West Europe, South/West Asia, Africa, Much of North America, South America, Pacific, Atlantic, Indian Ocean, Antarctica.

EVENT	UTC TIME	TIME IN S.A.
Penumbral Eclipse begins	16 May, 01:32	16 May, 03:32
Partial Eclipse begins	16 May, 02:27	16 May, 04:27
Full Eclipse begins	16 May, 03:29	16 May, 05:29
Maximum Eclipse	16 May, 04:11	16 May, 06:11
Full Eclipse ends	16 May, 04:53	16 May, 06:53
Partial Eclipse ends	16 May, 05:55	16 May, 07:55
Penumbral Eclipse ends	16 May, 06:50	16 May, 08:50

**25<sup>th</sup> October 2022 – Partial Solar Eclipse.**

**(NOT VISIBLE IN SOUTH AFRICA)**

Regions seeing, at least, a partial eclipse: Europe, South/West Asia, North/East Africa, Atlantic.

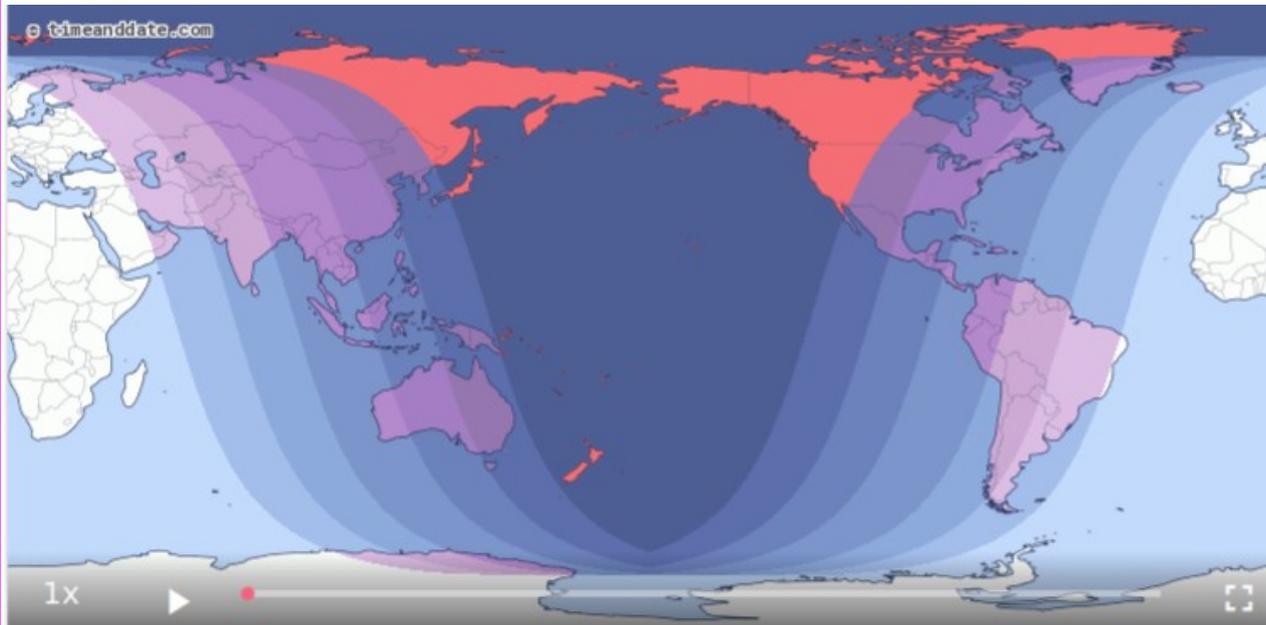

Event	UTC Time	Time in S.A.
First location to see the partial eclipse begin	25 Oct, 08:58	25 Oct, 10:58
Maximum Eclipse	25 Oct, 11:00	25 Oct, 13:00
Last location to see the partial eclipse end	25 Oct, 13:02	25 Oct, 15:02

## 8<sup>th</sup> November 2022 — Lunar Eclipse.

### (NOT VISIBLE IN SOUTH AFRICA)

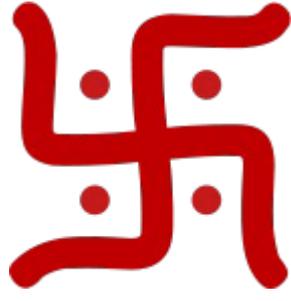

Regions seeing, at least, some parts of the eclipse: North/East Europe, Asia, Australia, North America, Much of South America, Pacific, Atlantic, Indian Ocean, Arctic, Antarctica.

Event	UTC Time	Time in S.A.
Penumbral Eclipse begins	8 Nov, 08:02	8 Nov, 10:02
Partial Eclipse begins	8 Nov, 09:09	8 Nov, 11:09
Full Eclipse begins	8 Nov, 10:16	8 Nov, 12:16
Maximum Eclipse	8 Nov, 10:59	8 Nov, 12:59
Full Eclipse ends	8 Nov, 11:41	8 Nov, 13:41
Partial Eclipse ends	8 Nov, 12:49	8 Nov, 14:49
Penumbral Eclipse ends	8 Nov, 13:56	8 Nov, 15:56
