

Eclipse Dates in 2023

The scientific point of view: An eclipse occurs when one object gets in between you and another object and blocks your view. From Earth, we routinely experience two kinds of eclipses: an eclipse of the Moon and an eclipse of the Sun.

Eclipses of the Moon: Sometimes, as the Earth orbits the Sun, it comes between the Sun and the Moon. When this happens, the Earth throws a dark shadow across the Moon. This is known as an eclipse of the Moon, or a lunar eclipse.

Eclipses of the Sun: Sometimes, the Moon passes between the Earth and the Sun. The Moon blocks the light of the Sun and a shadow of the Moon is cast on the Earth's surface. This is an eclipse of the Sun, or a solar eclipse.

There are three types of a solar eclipse: total, partial, and annular. During a total eclipse, the Moon completely covers our view of the Sun. A total eclipse is only visible from a narrow strip (about 150 km wide) of the Earth's surface at any one time. From the areas outside this narrow strip, the Sun appears to be only partially covered and a partial eclipse is seen. A partial eclipse will also occur if the Sun, Moon, and Earth are not precisely lined up. The eclipse cannot be total unless the center of the Moon's shadow is able to strike the Earth. The eclipse type that occurs when the Moon is at its farthest distance from the Earth is an annular eclipse. The Moon then appears too small to completely block out the disk of the Sun.

During a solar eclipse, the Moon actually casts two shadows toward Earth. One shadow is called the umbra which becomes smaller as it reaches the Earth. This is the dark center of the Moon's shadow. The second shadow is called the penumbra. This shadow becomes larger as it reaches the Earth. A total solar eclipse, or a complete blocking out of the Sun's light, can only be seen by those who live in the area covered by the umbra. People who live in the area of the Earth covered by the penumbra will see a partial eclipse.

A total solar eclipse can only occur when two events happen at the same time. The first event is a new Moon. This phase of the Moon occurs when the Sun is almost directly behind the Moon, and we see only a sliver of the Sun's light reflected by the Moon. During this time the Moon and the Sun appear close together. The second event that must occur is that the Moon must be in the right position, directly in the line of sight between the Earth and the Sun. These two events occur at the same time about once every year and a half.

2023 Solar Eclipse's

20th April 2023 - Total Solar Eclipse (**NOT** visible in South Africa)

14th October 2023 – Solar Eclipse (**NOT** visible in South Africa)

2023 Lunar Eclipse's

5th May 2023 - Penumbral Lunar Eclipse (**Visible** in South Africa)

28th October 2023 - Partial Lunar Eclipse (**Visible** in South Africa)

An Eclipse Never Comes Alone: A solar eclipse always occurs about two weeks before or after a lunar eclipse. Usually, there are two eclipses in a row, but other times, there are three during the same eclipse season.

Kindly note:

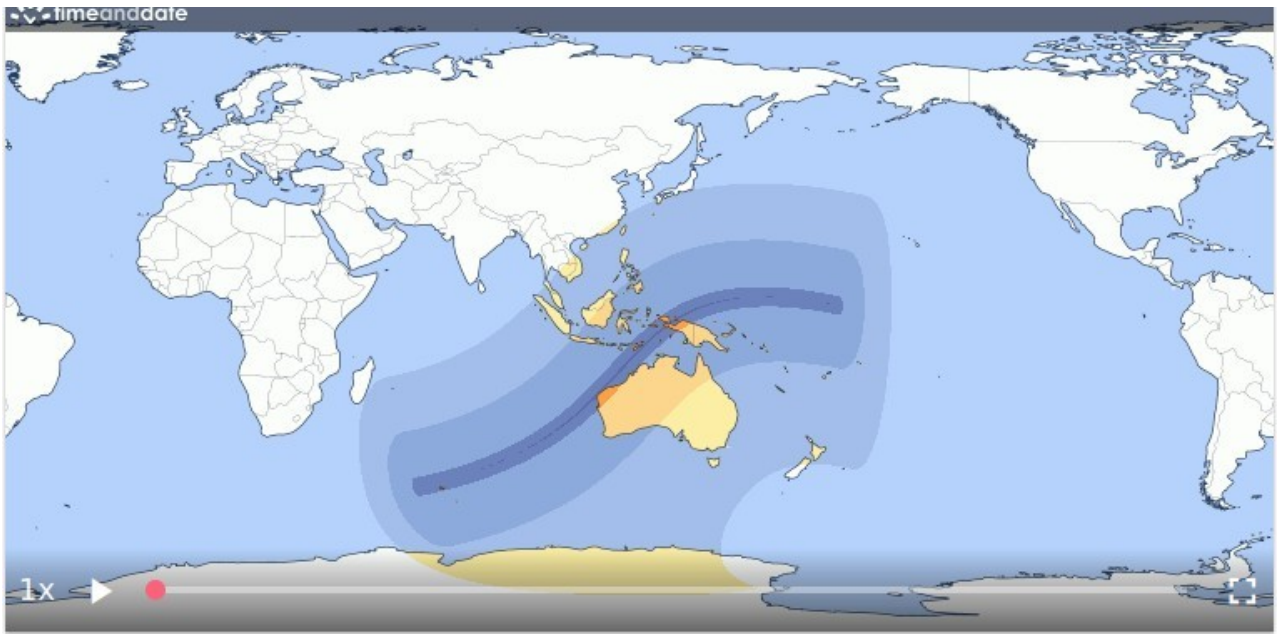

If an Eclipse is not visible in your locality during an Eclipse then nothing is to be observe.

If an Eclipse is visible in your locality during an Eclipse then kindly click on this link for the Do's and Don't

20th April - Total Solar Eclipse (NOT visible in South Africa)

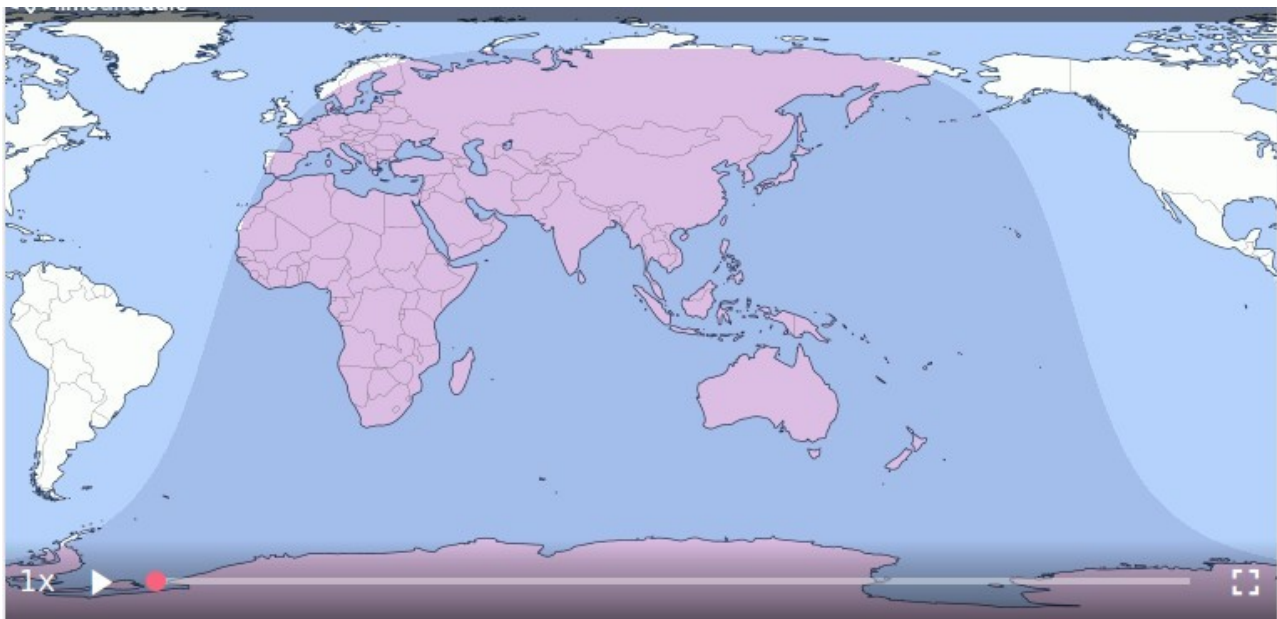

The path of totality passes over North West Cape, a remote peninsula of Western Australia. Regions seeing, at least, a partial eclipse: South/East Asia, Australia, Pacific, Indian Ocean, Antarctica.

First location to see the partial eclipse begin	20 April, 01:34	20 April, 03:34
First location to see the full eclipse begin	20 April, 02:37	20 April, 04:37
Maximum Eclipse	20 April, 04:16	20 April, 06:16
Last location to see the full eclipse end	20 April, 05:56	20 April, 07:56
Last location to see the partial eclipse end	20 April, 06:59	20 April, 08:59

5th May 2023 Penumbral Lunar Eclipse (Visible in South Africa)

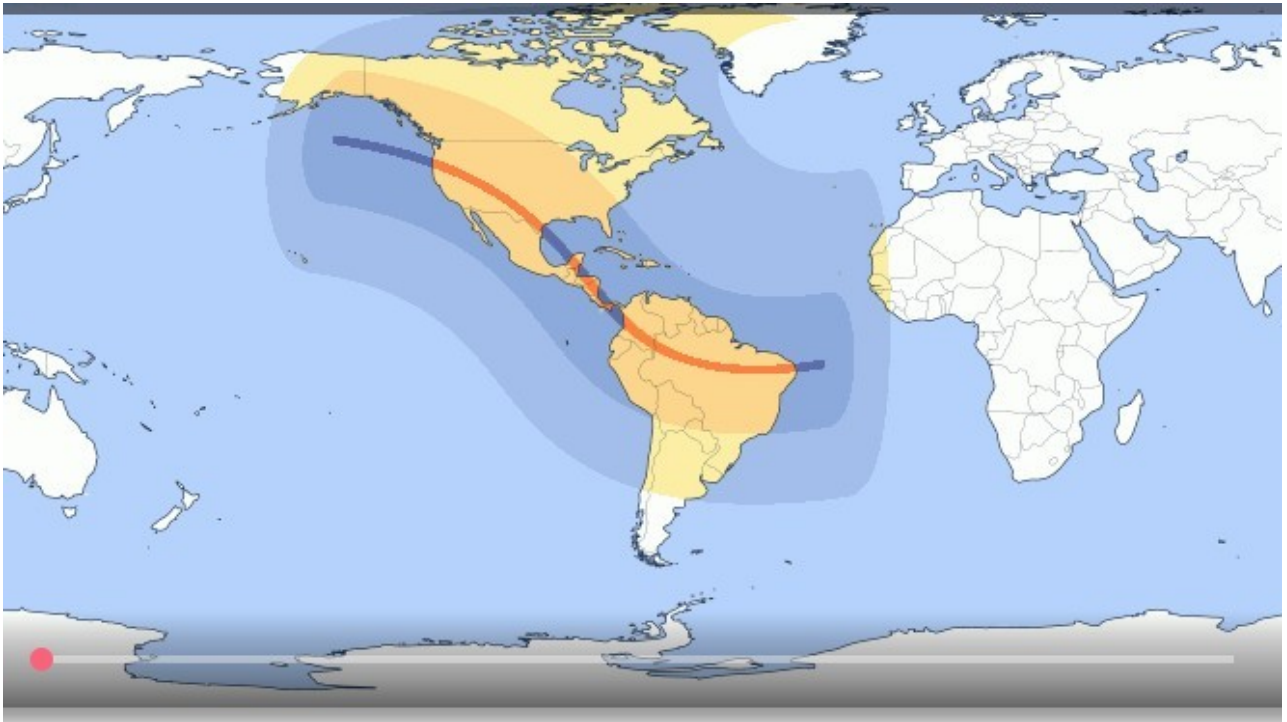

Regions seeing, at least, some parts of the eclipse: South/East Europe, Much of Asia, Australia, Africa, Pacific, Atlantic, Indian Ocean, Antarctica.

Penumbral Eclipse begins	5 May, 15:14	5 May, 17:14
Maximum Eclipse	5 May, 17:22	5 May, 19:22
Penumbral Eclipse ends	5 May, 19:31	5 May, 21:31

14th October 2023 – Solar Eclipse (NOT visible in South Africa)

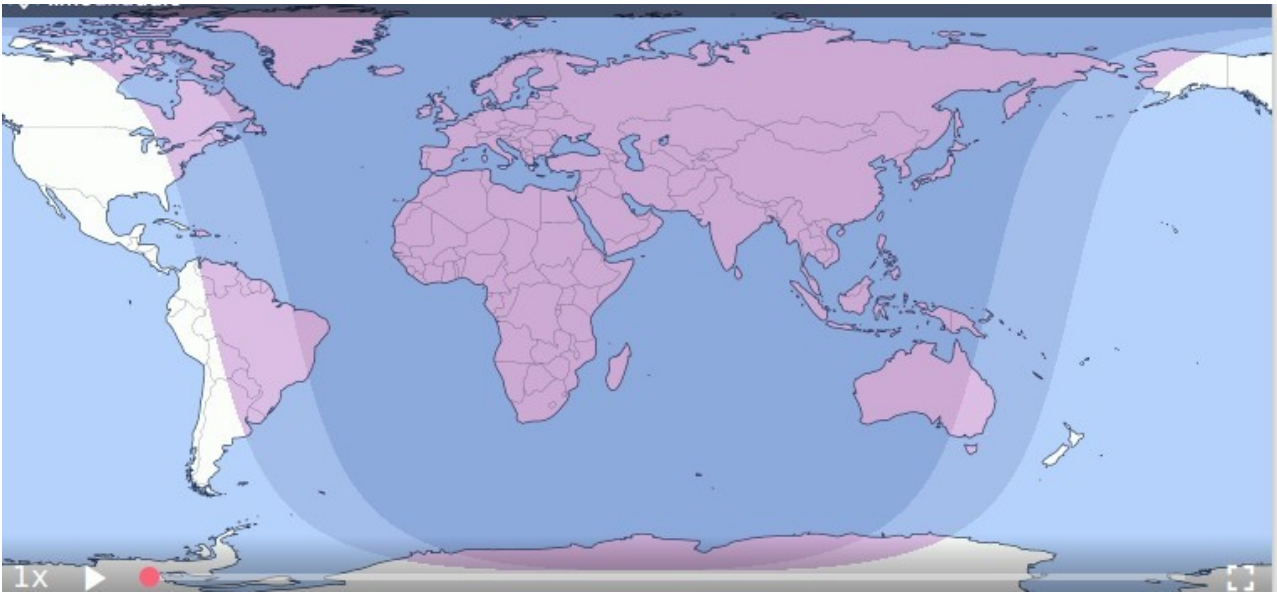

Regions seeing, at least, a partial eclipse: West in Africa, North America, South America, Pacific, Atlantic, Arctic.

First location to see the partial eclipse begin	14 Oct, 15:03	14 Oct, 17:03
First location to see the full eclipse begin	14 Oct, 16:10	14 Oct, 18:10
Maximum Eclipse	14 Oct, 17:59	14 Oct, 19:59
Last location to see the full eclipse end	14 Oct, 19:48	14 Oct, 21:48
Last location to see the partial eclipse end	14 Oct, 20:55	14 Oct, 22:55

28th October 2023 - Partial Lunar Eclipse (Visable in South Africa)

Regions seeing, at least, some parts of the eclipse: Europe, Asia, Australia, Africa, North America, North/East South America, Pacific, Atlantic, Indian Ocean, Arctic, Antarctica.

Penumbral Eclipse begins	28 Oct, 18:01	28 Oct, 20:01
Partial Eclipse begins	28 Oct, 19:35	28 Oct, 21:35
Maximum Eclipse	28 Oct, 20:14	28 Oct, 22:14
Partial Eclipse ends	28 Oct, 20:52	28 Oct, 22:52
Penumbral Eclipse ends	28 Oct, 22:26	29 Oct, 00:26

DISCLAIMER: Do note that Dipika is not affiliated to any Hindu group or organization. We at Dipika choose to remain an independent repository of spiritual advice. We appreciate that there are variances between organisations and humbly request that if our views differ from yours that you respect our decision not to conform to the prescripts of your particular organisation. We remain committed to spiritual advice which is based on scripture.

Thank you so much for taking the time to read this article. We pray that this article will assist you in some way and we also pray that it helps you to appreciate the beauty and remarkable foresight of our ancient Hindu culture. We wish to educate all readers and demystify the path of Hinduism (Sanatan Dharma). Please feel free to share these articles with friends and family who do not have direct access to our website or articles. If you use the articles in any form including blogs and/or as part of other articles kindly credit our website as a source. We hope that the articles serve as a reference to you and your family when you need clarification of certain topics. Jai Shree Radha Krsna.
